generating a program portion for sending to the source of the access

request,

wherein said program portion is operable and after the program portion

is permitted to run at the source of the access request, in use:

generating a request for access to the cryptographically protected

data set;

on receipt of the cryptographically protected data set, converting

it into an unprotected form; and

selectively controlling access to copy-or-save-functions in respect

of the data set when in said unprotected form.

Please add the following new claims:

--34. (New)   A method of controlling access to data downloaded

from a server computer to a client computer, said method comprising:

downloading a protected copy of requested data from a server to a

client; and

running a program at the client so that after running the program at the

client has begun at the client, the program serves to both: (a) unprotect the

downloaded data thereby to provide access to an unprotected copy of the

requested data, and (b) suppress client computer copy or save functions with

respect to the unprotected copy of the requested data.

35. (New) A method of controlling access to data sent from a server to a client, said method comprising:

running a program portion at the client, the program portion generating and uploading to the server a request for access to data;

cryptographically protecting the data;

sending the cryptographically protected data to the client; and

after access to the program portion is permitted and under control of the program portion, converting the cryptographically protected data to an unprotected form and restricting or preventing access to copy or save functions at the client in respect of the data in its unprotected form.

36. (New) A method of controlling access to data downloaded from a server computer to a client computer, said method comprising:

downloading a protected copy of requested data from a server to a client; and

running a program at the client after access to the program is permitted to both: (a) unprotect the downloaded data thereby to provide access to an unprotected copy of the requested data, and (b) restrict or prevent client computer copy or save functions with respect to the unprotected copy of the requested data.

37. (New) A method as in claim 30, wherein the program running at the client generates and uploads a request for data from the client to
